

Comcast Business SecurityEdge™

Not all threats come through the front door

Your business may be at risk

Hackers and malware developers don't take a day off. Which is why in the last 12 months¹, **65% of small businesses have experienced a cyber attack**. Your business needs to protect all connected devices with an advanced, affordable cybersecurity tool that actively checks your network for new threats, such as malware, every 10 minutes.

Comcast Business SecurityEdge is a powerful yet simple cloud-based security solution that helps to protect your business from costly security breaches.

Already have security in place?

Comcast Business SecurityEdge complements other security tools you already may have in place, such as anti-virus and firewalls, by helping to protect against cybersecurity threats including malware, ransomware, phishing and botnet infections. But, Comcast Business SecurityEdge is unique from others in the category in that it protects all connected devices without requiring individual software downloads to each device.

FOR MORE INFORMATION,
please reach out to your Comcast Business Solutions Provider.

Comcast Business SecurityEdge:

Easy set up and no equipment required — Comcast Business SecurityEdge is built into existing hardware so you have an all-in-one connectivity and security solution without additional equipment.

Protection to all Internet-connected devices — Since the service is delivered over the cloud and runs through the Comcast Business Router, all devices connected to the Internet are automatically protected.

Security that is constantly updating and looking for new threats in real-time — Because Comcast Business SecurityEdge is cloud-based, it offers near real-time protection with updates occurring automatically, every 10 minutes.

Visibility anytime and anywhere — See what is happening on your network by monitoring blocked threat activity via personalized dashboard and email reporting.

Content filtering — Content blocking and filtering allows businesses to set up personalized filters to block use of unwanted websites from employees and customers.
